                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A process has been developed for the production of a DNA fragment encoding silk protein. The process involves: (a) selecting target DNA, from a silk-producing spider, that contains many repetitive and non-repetitive regions; (b) selecting a single-stranded DNA primer of at least 10 nucleotides with a sequence that is complementary to a region of the target; (c) repetitively combining the primer with melted target DNA, incubating the mixture with nucleotides and a DNA polymerase with profire adding activity to produce a DNA fragment which is complementary to the target and is at least 2 kb long. The present sequence from Nephila clavipes. The DNA fragment can be used to make fibres, from Nephila clavipes. The DNA fragment can be used to make fibres, films, woven articles, e.g. for use in parachutes, sails, body armour, flavours and fragrances). The high molecular weight (90-250 kb) of spider silk proteins can be produced on a commercial scale (at over silkworm silk. Inclusion of both repetitive and non-repetitive regions ensures isolation of stable clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nephila clavipes; silk protein; tandem repeat; fibre; dragline; tensile strength; elasticity; ss.

```
The present sequence encodes a spider silk protein from the present invention. Spider silk proteins, and peptide fragments within the proteins, can be produced and purified independently and can then be mixed and made into fibres that have higher tensile strengths and elasticity than naturally occurring fibres. The fibres can be used in mixed composites. The invention allows the two naturally occurring Nephila clavipes silk proteins to be produced independently so that they can later be combined to form silk fibres of high tensile strength
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               633

                                                                                                                                                                                                                                                                                  The invention provides isolated cDNA molecules coding for spider silk proteins. The spider silk proteins are characterized by repeating alpha and beta regions and optional variable regions. The DNA sequences are useful in the production of spider silk protein by recombinant DNA techniques. The recombinant spider silk proteins may be used for the production of fibers. The present sequence represents the cDNA encoding the spider silk protein 1, derived from the major ampullate gland of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A N.clavipes major ampullate gland cDNA library was screened with probes based on peptide fragments of the purified spider silk protein (see AAQ14185). Positive plaques were identified and the spider silk protein 1 coding sequence was determined. See also

Novel human transporter and ion channel proteins useful for treating and preventing transport, neurological, muscle and immunological disorders

Claim 5; Page 151-152; 160pp; English.

The present sequence is transporter and ion channel-17 (TRICH-17) cDNA.

TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, conditions is. Becker's muscular dystrophy, charcot-Marie Tooth disease, buchene muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, ammesia, bipolar disease, dementia, depression, epilepsy, ischaemic cerebrovascular disease and Parkinson's disease, but function's disease, Huntington's disease, atroke, cerebral neoplasms, Pick's disease, Huntington's disease and Parkinson's disease, demyelinating disease, Huntington's consisting mood, anxiety, Schizophrenia and seasonal affective disorders, muscle disorder including radiomyopathy, myocarditis, polymyositis, dermatomyositis, arrhythmias and asthma and immunological disorders, anemial disorders and militus, freumatoid arthritis, scleroderma, Sjorren's syndrome, systemic lupus erythematosus and other diseases including sickle cell anaemia, Wilson's disease, cataracts, infertility, pulmonary altery stenosis, Grave's disease, Cushing's disease, dinnonary altery stenosis, Grave's disease, Cushing's disease, altery stenosis. glucose-galactose malabsorption syndrome, hypercholesterolaemia, cancers psoriasis and viral, bacterial, fungal, helminthic and protozoal Sections: and Viral, bacterial, fungal, helminthic and protozoal infections. TRICH DNA is useful in gene therapy and in diagnostic

The present sequence is human tumour suppressor gene 16 (TSG16). This sequence was isolated from chromosome 16q24.3. TSG16 suppresses cellular proliferation. TSG16 is useful for treating disorders associated with decreased expression or activity of TSG16. e.g. cancers, (auto)immune disorders, inflammation, complications of wound healing and infections
                                                                                                                                                                                        1855 aggaettecagaageaggegtegeeetggeetttgtggggeetgeaggteeeegttetee 1914

producing mature heterologous protein in monocotyledonous plant cells. The method comprises transforming the cells with a chimmert genee comprising a monocotyledon transcription regulator, inducible either during seed maturation or by adding/removing a small molecule, DNA encoding the heterologous protein, and DNA encoding a signal peptide, with the signal peptide causing secretion of the protein from the cell. Proteins expressed in this manner include mature glycosylated alpha increases its serum half-life, mature glycosylated antithrombin III (ATII), mature human serum ablumin (HSA) having the native folding pattern as shown by bilirubin-binding characteristics, or mature active subtilisin BDN. These proteins are useful therapeutically (e.g. AAT for treating emphysema, ATIII as antithrombotic and HSA as blood replacement) or as industrial enzymes (BDN' is used in detergents).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               643

                                                           The present sequence encodes a cysteine proteinase isolated from wheat seed (Triticum sp.). The cysteine proteinase is useful for improving gluten for use in the bakery process.

This DNA sequence encodes a caffeoyl-CoA 3-O-methyltransferase (see AAY05669) of maize. A polynucleotide having this sequence can be amplified from a cDNA library prepared from shoot culture of amplified from a cDNA library prepared from shoot culture of maize line CMA5 using the primars given in AAX25241 and AAX35242. The invention provides methods and compositions relating to altering inspirates and/or the lighin composition of plants.

Solated nucleic acids (see AAX2196-116) that code for proteins (see AAX05657-77) involved in lighin biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cells.

AAY05657-77) involved in lighin biosynthesis are claimed. Also claimed nucleic acids can be used to transform a plant to modulate lighin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lighin biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant gend of a time sufficient to modulate (preferably increase) lighin biosynthesis in the plant. The plant lighins can be used as chemical feedstock. Plant material of increased lighin content can be used as a fuel source, and in the pulp and paper industry. Decreased lighin content crops.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  476 cgtggaggttgccaaccccggctccttcatctacgtcttctcggatgcccgtgccaagga 535

The nucleotide and deduced aa sequences of human transducin-like enhancer of split proteins TLE-1 (AAQ45333, AAR51109), TLE-2 (AAQ45334, AAR51111) and TLE-4 (AAQ45335, AAR52953) were determined. The aa sequences were compared with that of Drosophila E(spl) m9/10 (AAR52955). Comparison of the WD-40 domains of these proteins defined the consensus residues shown in AAR22954. The CCN motifs of the proteins were compared with those of SV40 T antigen, human e-myc, human p53, human A-myb and dorsal protein with respect to nuclear localization site, and casalirkinase and cd2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tgtcaccggctccatgtgggacgatctgatgcaggtgatcgacggcgtcacgcattct 289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       469
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     358 gcaggtcaccgigggggagctgaacagccicatcgggcagcagctccagccgctgtccca 417

New isolated metalloprotease thrombospondin polypeptides, useful for treating hyperproliferative disorders, cancers or autoimmune disorders

Disclosure; Page 322-324; 457pp; English

MAZI AAZI 2000 and AAZI 2001 encode, and AAY 49501 and AAY 49502 represent, human metalloprotease thrombospondin (METH) proteins METH1 and METH2.

Tespectively. METH1 and METHZ have been found to be potent inhibitors of angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psoriasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, haemangiomas, and arterial venous malformations.

They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, cr mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some autoimmune disorders may be genetic, somatic, such as toxins), or infectious. They can also be used to treat infiammatory conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis. AAZI2002 to AAZI2080, and AAY49503 to AAY49511 represent sequences given in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                Morley, K.C.

Direct Submission

Submitted (16-0402-2011) Sanger Centre, Hinxton, Cambridgeshire,
CBLO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk

on Aug 18, 2001 this sequence version replaced gi:15020463.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >-
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AL360004 182211 bp DNA PRI 16-AUG-2001

NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Chemistry: Dye-primer Bodipy: 74% of reads

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working draft' sequence. It currently consists of 45 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Quality coverage: 3.6 in Q20 bases; sum-of-contigs

Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other available information.

Current sequence finishing criteria for the C. elegans genome current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones.

Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is not the entire insert of clone F1569.

It may be shorter because we only sequence overlapping sections once, or longer because we only sequence coverlapping sections neighbouring submissions.

The true left end of clone F1569 is at 1 in this sequence. The true right end of clone F1569 is at 4082 in sequence. The true right end of clone C4303 is at 8835 in this sequence. The start of this sequence (1. .101) overlaps with the end of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The end of this sequence (41245. .41345) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               For a graphical representation of this sequence and its analysis see:- http://wormbase.sanger.ac.uk/perl/ace/elegans/seq/sequence?

McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                            NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                  This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-375L10;
actual end is at base position 180248 of RP11-375L10.

The present sequence encodes a novel secreted factor. The invention relates to a polypeptide comprising a sequence of at least 80% identity to residues 22-122 of a 275 amino acid sequence, or a sequence encoded by a nucleic acid hybridising under stringent conditions to the complement of the coding region comprising 1031 nucleotides, and having at least one biological activity of the polypeptide encoded by clone P00210009. The polypeptides and polynucleotides of the invention are useful for the treatment of cardiac, renal and inflammatory diseases. The polypucides are useful in antisense mediated gene inhibition and in gene therapy. The polypeptides are useful in assays for identifying lead compounds that may be useful in assays for
                                                                                                                           Novel secreted factor encoded by clone P00210D09 useful for diagnosing, treating and/or preventing various cardiac, renal and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treatment of cardiac, kidney or inflammatory diseases.

```
concoling silk process involves: (a) selecting target DNA, encoding silk protein. The process involves: (a) selecting target DNA, from a silk-producing spider, that contains many repetitive and non-repetitive regions; (b) selecting a single-stranded DNA primer of at least 10 nucleotides, with a sequence that is complementary to a region of the target; (c) repetitively combining the primer with melted target DNA, incubating the mixture with nucleotides and a DNA polymerase with profreading activity to produce a DNA fragment which is complementary to the target and is at least 2 kb long. The present sequence represents a 2 kb DNA sequence which encodes the spider silk protein from Nephila clavipes. The DNA fragment can be used to make fibres, from Nephila clavipes. The DNA fragment can be used to make fibres, and absorbers (e.g. of heavy metals, biological weapons, DNA, chemicals, concerns and fragrances). The high molecular weight (90-250 kD) of

tensile strength; elasticity; ss.
spider silk proteins can be produced on a commercial scale (at over 2 g/l cell mass). It has better tensile strength and elasticity than silkworm silk. Inclusion of both repetitive and non-repetitive regions ensures isolation of stable clones.

```
The present sequence encodes a spider silk protein from the present invention. Spider silk proteins, and peptide fragments within the proteins, can be produced and purified independently and can then be mixed and made into fibres that have higher tensile strengths and elasticity than naturally occurring fibres. The fibres can be used in mixed composites. The invention allows the two naturally occurring Nephila clavipes silk proteins to be produced independently so that they can later be combined to form silk fibres of high tensile strength
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       518
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   538

                                   proteins. The spider silk proteins are characterized by repeating alpha and beta regions and optional variable regions. The DNA sequences are useful in the production of spider silk protein by recombinant DNA techniques. The recombinant spider silk proteins may be used for the production of fibers. The present sequence represents the cDNA encoding the spider silk protein 1, derived from the major ampullate gland of
                             invention provides isolated cDNA molecules coding for spider silk

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       459 tcttgaaagccaagcagcaggacgaggtggattaggtggacaaggtgcaggtgcagcagc
                                                                                                                                                                                                             A N.clavipes major ampullate gland cDNA library was screened with probes based on peptide fragments of the purified spider silk protein (see AAQ14185). Positive plaques were identified and the spider silk protein I coding sequence was determined. See also

```

```
The present sequence is transporter and ion channel-17 (TRICH-17) cDNA.

TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH.

Such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth disease.

CC disease, Duchenne muscular dystrophy, angina and hypertension, churchogical disorders including Alzheimer's disease, mensia, bipolar disease, stroke, cerebral neoplasms, Pick's disease, Huntington's disease and Parkinson's disease, demyelinating diseases, mental disorders including mood, anxiety, Schizophrenia and seasonal affective disorder, dermatomyositis, arrhythmias and asthma and immunological disorder; dermatomyositis, arrhythmias and each and infamon and asthma and immunological disorder; concluding AIDS, adult respiratory distress syndrome (ARDS), allergies, sincluding AIDS, adult respiratory distress syndrome (ARDS), allergies, sanemia, diabetes mellitus, rheumatoid arthritis, scleroderma, Sjogren's syndrome, systemic lupus erythmenatosus and other diseases including sickle cell anaemia, Wilson's disease, cataracts, infertility, pulmonary contribes and beckers and expenses including sickle cell anaemia, disberterial physorythmias and expenses including sickle cell anaemia, disease, cataracts, infertility, pulmonary converse and expenses including converse and expenses including converse and expenses including converse and expenses including converse malaborption syndrome, hypercholesterolema, cancers

This sequence was isolated from chromosome 16q24.3. TSG16 suppresses cellular proliferation. TSG16 is useful for treating disorders associated with decreased expression or activity of TSG16, e.g. cancers, (auto)immune disorders, inflammation, complications of wound healing and infections (by viruses, bacteria, fungi, parasites, protozoa or helminths).

signal sequence/mature alphal-antitrypsin (AAT). The protein is used to exemplify the invention. The specification describes a method for producing mature heterologous protein in monocotyledonous plant cells. The method comprises transforming the cells with a chimeric gene comprising a monocotyledon transcription regulator, inducible either during seed maturation or by adding/removing a small molecule, DNA encoding the heterologous protein, and DNA encoding a signal peptide, with the signal peptide causing secretion of the protein from the cell. The control of the signal peptide causing secretion of the protein from the cell. The control of the signal peptide causing secretion of the protein from the cell. The control of the signal peptide causing secretion of the protein from the cell. The control of the signal peptide causing characteristics, or mature exting the control of the control of the signal peptide causing emphysema, ATIII as antithrombotic and HSA as blood replacement)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present sequence encodes a fusion protein of codon-optimised RAmy3D
                                                                                                                                                                                                                                                                 Protein expression; monocotyledon plant cell; glycosylated antithrombin III; glycosylated alpha 1-antitrypsin; ART; glycosylated alpha 1-antitrypsin; ARTIII; human serum albumin; HSA; subtilisin BPN'; treatment; emphysem: antithrombotic; blood replacement; ss.

A polynucleotide having this sequence can be amplified from a CDNA library prepared from shoot culture of maize line CM45 using the primers given in AAX25241 and AAX25242. I invention provides methods and compositions relating to altering

ignin biosynthesis and/or the lignin composition of plants.
Isolated nucleic acids (see AAX25196-216) that code for proteins (see AAY05657-77) involved in lignin biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cells (seeds. The claimed nucleic acids can be used to transform a plant to modulate lignin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lignin biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) lignin biosynthesis in the plant. The plant lignins can be used as chemical feedstock. Plant material of increased lignin content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer content can be used as a fuel source, and in the answer can be used as a fuel source.

The nucleotide and deduced as sequences of human transducin-like enhancer of split proteins TLE-1 (AAQ62175, AAR51476), TLE-2 (AAQ62176, AAR51478) and TLE-4 (AAQ62177, AAR51479) were determined. The as sequences were compared with that of Drosophila E(spl)m9/10 protein (AAR51481). Comparison of the WD-40 domains of CCN motifs of the proteins were compared with those of the Sy40 T antigen, human c-myc, human p53, human A-myb and dorsal proteins with respect to nuclear localization site, and casein-kinase II and cdc-kinase phosphorylation sites (sequences AAR51482-96). TLE can be to study cell differentiation.

                                                                                                                                                                                                                                                                                                                                                             The nucleotide and deduced aa sequences of human transducin-like enhancer of split proteins TLE-1 (AAQ45333, AAR51109), TLE-2 (AAQ45334, AAR51110), TLE-2 (AAQ45334, AAR51111) and TLE-4 (AAQ45336, AAR52953) were determined. The aa sequences were compared with that of Drosophila E(spl) m9/10 (AAR52955). Comparison of the WD-40 domains of these proteins defined the consensus residues shown in AAR52954. The CCM motifs of the proteins were compared with those of SV40 T antigen, human c-myc, human p53, human A-myb and dorsal protein with respect to nuclear localization site, and casein-kinase and cd2-

metalloprotease thrombospondin (METH) proteins METH1 and METH2
respectively. METH1 and METH2 have been found to be potent inhibitors of angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psoriasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, haemangiomas, and arterial-venous malformations. They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, sometic, such as cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis. AAS23002 to AAS2300, and AAY49511 represent sequences given in the exemplification of the present

The present invention relates to human METH1 and METH2, (ME for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003).

The present sequence is an expressed sequence tag (EST) for METH. METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, Osler-Webber syndrome, plaque neovascularisation, telanglectasia, haemophiliac joints, anglofibroma, thoromscular dysplasia, wound granulation, corbn's disease or atherosclerosis. METH can also be used in birth control. METH can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
